

PYTHON DEVELOPER

TASK-6

Description:

Develop a billing software application using Python that includes a userfriendly graphical user interface (GUI) for managing customer transactions, generating invoices, and tracking sales. The application should handle product details, pricing, customer information, and generate printable bills or invoices.

Responsibility:

1. Environment Setup:

- Install and configure necessary software and libraries (e.g., Python, Tkinter)

2. Database Design:

- Design the database schema to store product, customer, and transaction details.

3. GUI Design and Development:

- Design the layout of the application using Tkinter or any other Python GUI framework.
- Create forms for product entry, customer details, billing, and invoice generation.
