

MEAN STACK (TASK 2)

Task 2: User Authentication

Level: Intermediate

Description:

Enhance the CRUD application from Task 1 by adding user authentication. Users should be able to register, log in, and only manage their own items.

Requirements:

1. Implement user registration and authentication using Passport.js.
2. Secure API routes to ensure only authenticated users can access them.
3. Create user-specific item management functionality.
4. Include a password reset feature.
5. Store user data securely in the database.

Deliverables:

- A MEAN stack application with user authentication and secure data access.
- Detailed documentation on how to use the authentication features.
