JAVA DEVELOPMER

TASK-1

Build a Simple CRUD Application

Description:

Create a basic web application using Java, Spring Boot, and a front-end framework like React.js or Angular. The application should perform CRUD (Create, Read, Update, Delete) operations on a simple entity such as a todo list or a blog post.

Responsibility:

1. Set up a Spring Boot project.
2. Implement RESTful APIs for CRUD operations.
3. Develop a basic front-end interface to interact with the APIs.
